

ALUBRA BEAMS

The ALUBRA Beams are the basic components of several light weight constructions. There are four different beams available, 100 mm (3,93 in) side with 4 grooves, 75 mm (2,95 in) side with 2 or 4 grooves and 50 mm (1.97 in) side with 4 grooves.

QUALITY

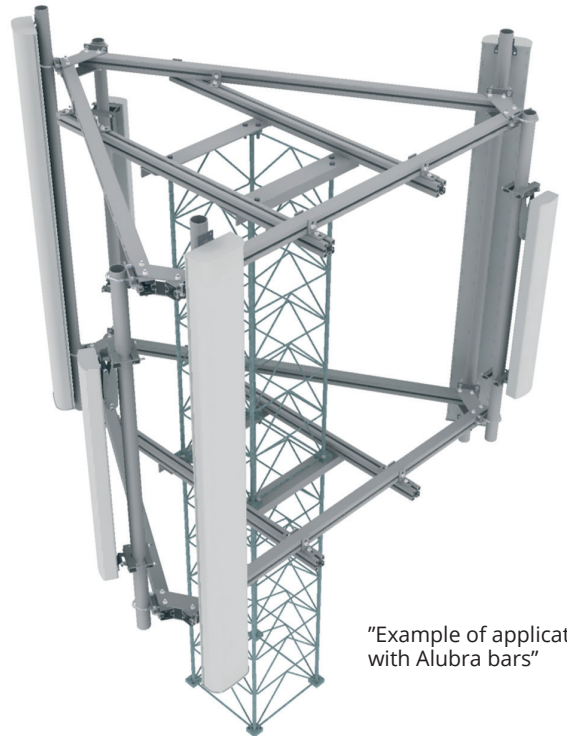

The ALUBRA beams are made of age hardened anodized aluminium which gives the beams excellent corrosion resistance and strength.

EASY ASSEMBLY

The choice of material makes the product very light which makes the handling and installation very easy.

FLEXIBILITY

The grooves on the side of the beams fits a standard DIN M12 bolthead with washer except Alubra 50/4 that require standard DIN M10 bolthead only. This enables easy assembly to clamps, angles or brackets of almost any kind.
