

Quality and Environmental Policy

Our ambition is to be best in class for designing and supplying cost-effective telecom network infrastructure equipment. The products shall be made from the most efficient material and production methods.

A sustainable development of Cue Dee AB requires that we work systematically to continuously improve quality, to reduce impact on the environment and to offer employees a safe and engaging work environment.

When developing our quality standards, we aim primarily to satisfy our customers' explicit and non-explicit expectations.

We shall, where technically possible and economically defensible, take the environment into account and thereby lay a foundation for a proactive approach in environmental management.

We will use our natural resources with care and systematically reduce waste of all kinds.

Through a continuous dialogue we will clearly make environmental-, quality- and OHS*-demands on our business partners and ourselves.

Our OHS-work aims to create a safe and engaging workplace. We will achieve this by systematically measure, risk analyse and take actions to achieve a constantly improving work environment – physically, socially, and organizationally. We believe a success factor in this work is involving our employees.

We will strive to continuously improve our organization and to comply with appropriate legislation and regulatory requirements as a minimum level of practice.

Our management system will be applied to all aspects of our business and is an important tool in our ambition to achieve more efficient processes, always with our customers, the environment, and our employees in focus.
